MEMO TO FILE:

Re: Atlas Minerals
Locust-Spider Mine
Sec. 5, T. 32 S., R. 25 E.
San Juan County, Utah

2107

ACT/037/008

This mine inspected on the 11th of January is a reactivation of old workings. Two portals existed previously and the same portals will be utilized for the new work. The eastern slope of a very steep canyon wall is the location of these portals. Very little pad is utilized for the surface facilities. The road, upon cessation of operations, will remain open for access to areas beyond the mine. Minimal reclamation will take place on the road itself, the only area to be graded and seeded will be the camp and small pads around the portals. Drainage over the pads is not expected to be a problem in this case.

Natural vegetation in the mine area consists of scattered pinyon and juniper, greasewood, serviceberry, rabbitbrush, and indian ricegrass.
